

CLEANING INSTRUCTIONS FOR TEC Shield

CLEANING INSTRUCTIONS: *The Tec Shield surface is very hard and durable and will withstand minor impacts or scuffs without significant damage. It is important however, to keep the surface clean of chemical and dirt build-up that will attack the surface over time. The surface should be washed and kept clean with standard non-abrasive glass cleaning solutions, such as Windex or non-commercial spray cleaners, or other liquid cleaning methods. In some cases a solution of soapy water will remove common dirt and residue that builds up on the surface. **Do not** use excessive pressure when scrubbing, gentle washing should be sufficient. **Abrasive pads or buffing compounds with grit should not be used on TEC Shield products.***

NOTE: *Frequency of cleaning will depend on the exposure to contaminants. Generally speaking, the TEC Shield surface **should be** kept clean of dirt and chemicals.*

Hexane or kerosene can be used to remove grease, oil and most other petroleum based products. These solvents may be obtained at a paint or hardware store and strict adherence should be used with manufacturer's recommendations.

Acceptable cleaners:

- Fantastik® • Glass Plus ® • Formula 409® • Top Job® • Mr. Clean®**
- Windex® Window cleaner**

NOTICE: *TEC Shield surfaces **should be cleaned on a regular basis.** Depending on conditions, the frequency may vary. If coating is used outdoors, care must be taken to avoid buildup of soot, oil, road dirt, hard water deposits, and other chemicals that may damage the surface. Whenever possible, **the TEC Shield surface should be kept away from exposure to harsh weather conditions.***
